

# Ridley Island Energy Export Facility

The Ridley Island Energy Export Facility (REEF) is a critical multi-phase project that will connect Canadian liquified petroleum gas (LPG) to global markets. Located on Ridley Island, near Prince Rupert, B.C., the project is the culmination of years of collaboration with Indigenous and local communities, as well as federal and provincial regulators. Complementing RIPET's foundational export impact, REEF will further establish Canada as a key energy trading partner on the global stage.

Connecting global markets with **Canadian** Liquified Petroleum Gas.

~55,000 Bbls/d of initial export capacity<sup>1</sup>

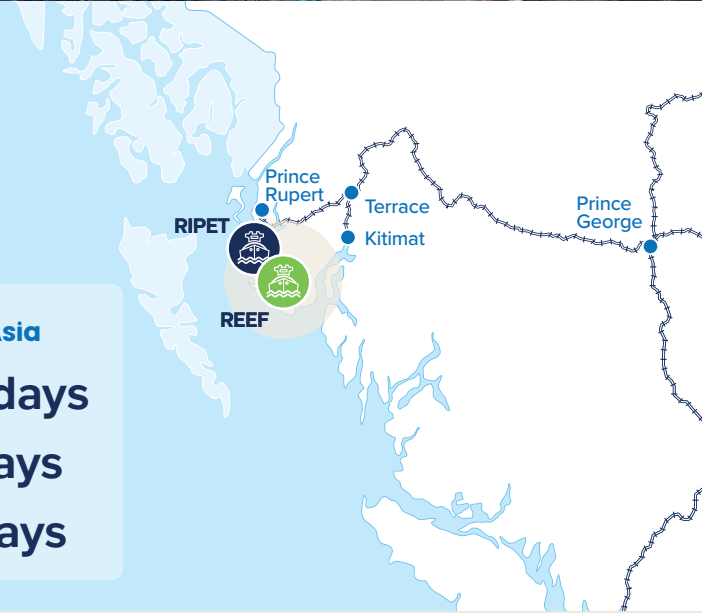

Propane and butane exports to Asia to grow **40%-50%** between now and 2040.

250+ jobs during peak construction.

## LPG exports shipping times to Asia

WEST COAST	→ 10-11 days
U.S. GULF COAST	→ 18+ days
ARABIAN GULF	→ 25+ days

## The AltaGas Value Chain

# Project Timeline

Safety is our top priority at every stage of the REEF project. From planning through construction and into operations, we are dedicated to meeting the highest safety standards, ensuring a secure environment for our workers, communities, and the surrounding area throughout the project timeline.

Equipment deliveries and installations. Ongoing throughout the entire project.

## Building a stronger community together

AltaGas and Vopak have been working closely with Prince Rupert Port Authority, Indigenous nations, local communities and federal and provincial regulators, to deliver a project that will operate with a focus on safety, community benefits, and a strong commitment to environmental stewardship. We will work with communities throughout the project lifecycle – from planning to decommissioning.

As early exporters of Canadian liquid petroleum gas (LPG) to overseas markets, we know what it takes to invest, build and grow Canada's position on the global stage.
